

“CHAT GPT WILD GANG PROMPTS BY SAJAWAL CREATES”

THIS PROMPT IS SUITABLE FOR BOTH BOYS & GIRLS.

PROMPT:

Using the attached reference photo for the human face, generate a hyper-realistic selfie-style photo of the same person, smiling, taking a selfie in a photography studio, surrounded by 6 original 3D-animated cartoon characters posing together as if part of a group selfie.

HUMAN: Keep the face, facial features, and likeness from the attached reference photo exactly consistent. Natural smile, holding the camera at arm's length (selfie angle), wearing a simple pastel-colored outfit.

CHARACTERS (original designs, cartoon proportions with photorealistic rendering):

1. Rocco the Raccoon — round fluffy body, dark grey and black fur with a black mask marking around both eyes, bushy striped tail, amber-brown eyes, red bandana around neck, black sunglasses, mischievous grin.
2. Nella the Cat — fluffy white fur, large blue eyes, pink bow-tie, elegant sassy diva expression, one eyebrow raised, sitting gracefully.
3. Milo the Owl — round fluffy body with brown and cream feather patterns, oversized golden-yellow eyes, small tufted ears, wearing a tiny graduation cap tilted to one side, wise-but-goofy expression with head tilted curiously.
4. Iggy the Parrot — bright green feathers with a yellow underbelly, ruffled feathers, exaggerated angry expression, orange beak wide open mid-squawk.
5. Doc the Tortoise — green shell with brown patterns, round wire glasses, calm wise expression, slow gentle smile.
6. Spike the Bulldog — stocky muscular body, fiery orange-red fur, small red vest, tough grumpy expression, underbite with visible bottom teeth.

SETTING: Professional photography studio, softbox lighting visible in background, neutral grey backdrop, behind-the-scenes photoshoot atmosphere.

STYLE: Photorealistic 3D character rendering — cartoon character designs and proportions, but rendered with hyper-realistic textures: individually visible fur strands, realistic feather detailing, wet realistic eyes with light reflections, soft subsurface scattering on skin/fur for natural depth, realistic studio lighting and shadows. The characters should look like living, tangible creatures — NOT flat, glossy, or plastic-looking animation. Cinematic lighting, warm golden tones, high detail, sharp contrast between the photorealistic human and the photorealistic-yet-stylized cartoon characters. Vertical portrait orientation, 4:5 aspect ratio.
