

“SAJAWAL CREATES PROMPT - 6”

Color Grading Prompt

Edit this photo into a cinematic The Lord of the Rings style while preserving the original composition, subject, pose, clothing, facial features, expression, camera angle, perspective, framing, and every background element exactly.

Transform the lighting into a soft sunrise from the upper left with natural god rays, subtle volumetric lighting, gentle morning mist, and a soft cinematic lens flare.

Apply a rich, natural color grade with deep greens, warm golden-hour highlights, a clean blue sky, accurate skin tones, and soft neutral shadows without an orange or yellow cast.

Enhance dynamic range, local contrast, texture, and detail to an iPhone 17 Pro Smart HDR look while keeping it fully photorealistic. Create an immersive fantasy atmosphere inspired by The Lord of the Rings that still looks like a genuine sunrise photograph, not AI-generated artwork.

Also enhance the overall image quality — improve sharpness and clarity, slightly smooth the subject's skin/face for a clean and natural look without making it look artificial, and improve lighting balance for a well-lit, vibrant appearance. Keep the rest of the image composition unchanged.
